

Motorized Inlet Shutter

Vostermans Ventilation puts an inlet shutter on the market for agricultural and industrial applications. This motorized inlet shutter causes air to enter the room in a controlled manner. In fully open position a relatively large amount of air, in comparison to traditional air intake systems, will flow into the room. However, in closed position the shutter lets almost no air and light through. Because the actuator is mounted on the inside of the shutter, installation is easy. The double bearing suspension of the louvers ensures a long life.

Features:

- The shutter closes quietly
- In closed position the illumination is reduced to a minimum in closed position
- The shutter remains closed during air pressure fluctuations (wind)
- The influence of dust on the moving parts is reduced
- Mounting is easy with standard tools
- Standard use with actuator

Advantages:

- Continuously the desired quantity of incoming air
- Less sensitive to wind influences
- Relatively low pressure drop for incoming air
- Longer lifetime of the various components
- Shorter installation time and maintenance
- Guaranteed performance

Performance curve inlet shutter (1300 mm)

Pressure and air flow may not exceed the maximum values (60 Pa en 38.000 m³/h).

Optional: - wire guard on inlet side of shutter
- actuator
